THE STORY OF WOMEN IN STEM

Daunemigha, Doubra
WDD 130.04

About

This website is made to acknowledge women in STEM and other male-dominated fields and their stories. I made this site because I was influence by the Hack-a-thon event this semester and I was proud to see a group of women among the winner and that is when I decided that I should make a website about women in STEM because I am sure that there are some women out there considering any major related to STEM but are unsure about it. This website is dedicated to women in STEM, and I hope that it will inspire other women who are interested in STEM or any other profession

Audience

Everyone is welcomed to visit the website, regardless of age, color, gender, religion, major, or social or economic background, but please respect everyone who participates; this should be a safe space for women to tell their stories. This is to increase the visibility of women in STEM and other male-dominated fields. Please contact me using the email address provided if you wish to be a part of this website in any way. Let's connect and make a history together.

Overview

Purpose

Envision a world where women's knowledge is disregarded. Ironically, we live in that world! This website is dedicated to women in STEM, and I hope that it will inspire other women who are interested in STEM or any other profession. If you're not sure how this applies to you, consider whether you're interested in STEM. Or do you want to be a part of the success stories of some of society's educated women? If you answered yes to both questions, you've arrived at the right place at the right moment, because not only will you learn about these ladies, but you'll also have the opportunity to CONNECT with them, so what are you waiting for? Visit the website to witness their bravery!

Design process

I changed the grip for one of the pictures in my home page and I didn't align it in the center, and I also switch the colors for my heading because the color I used at first didn't go with plan and design I had for the page. Aside from this, I don't think I made any major changes and it's still like my site plan.

Conclusion

I was very happy to talk and research more about women in stem and other male-dominated fields because this was subject that I was deeply attached to, and I was and still am proud of women who strive to stand out positively and are also willing to share their lights with world even though some may not want to see it. I am also happy that I was able to make this website completely by myself and it way easier than the water rafting site and it just shows how much this class has contributed to my life and skills. It was also empowering to design and make this website. I am glad I did.
